

Memory Forensics for Advanced Threat Detection - Memory Dump Resources

This document contains useful public memory dump datasets and tools for a project on Memory Forensics for Advanced Threat Detection.

Dataset	Purpose	Link
Volatility Memory Samples	General Windows/Linux dumps	https://github.com/volatilityfoundation/volatility/wiki/Memory-Dump-Samples
MemoryForensicSamples	Malware infected dumps	https://github.com/pinesol93/MemoryForensicSamples
OtterCTF Memory Dump	CTF and forensic practice	https://github.com/volatilityfoundation/volatility/wiki/Memory-Dump-Samples
Volatility Workbench	Windows 10/11 RAM dumps	https://www.osforensics.com/tools/volatility-workbench.html

Useful Volatility Commands

```
vol -f sample.mem windows.info
vol -f sample.mem windows.pslist
vol -f sample.mem windows.netscan
vol -f sample.mem windows.malfind
```

Suggested Project Workflow

1. Download an infected memory dump
2. Analyze running processes
3. Detect suspicious network connections
4. Identify malware indicators
5. Generate a forensic report
